

Engineering Structures for Life

BUILDINGS - HOTELS

Sheraton Porto Hotel & Spa

ABOUT

The "Sheraton Porto" is the most sophisticated and distinct "Hotel and Spa" in the city. GEG was in charge of the foundations and structural design. To the brightness of its architecture, the elegance of its interior design, the modernity of the chosen materials, such as the steel and the glass, this emblematic building added the rigour and the excellence of the geotechnical and structural engineering produced in Porto. Located in a noble zone and business centre of the city, Boavista, this hotel is constituted by twelve floors, providing more than 250 rooms and almost 2000 square meters of a congress centre.
